

Dear Golden Lake Riparian Owner:

Golden Lake Association has a permit issued by the Wisconsin Department of Natural Resources to apply herbicides for the control of Eurasian Watermilfoil (EWM), an invasive weed, in Golden Lake. The treatment will take place, weather permitting, June 1, 2020 with a backup date of June 2nd.

A copy of the Permit is available for your review at <http://www.golden-lake.org/>. A map of the areas being treated is attached to this email and on the website. Areas outlined in yellow on the map are the ones being treated with herbicide. Any questions can be directed to the Golden Lake Association Board by sending an email to: goldenlakeassociation@yahoo.com

Your Association is addressing as many of the areas of the lake with significant EWM as possible. A combination of donated funds and DNR Grant funds pay for the herbicide treatment and DASH (diver assisted suction harvesting) being used as control in 2020. These control activities are all occurring in the month of June.

Please consider signing up to your help volunteering for DASH kayak support, [View the Sign Up](#)

if you have EWM in front of your property please pull the plants by the roots and dispose of them in a place where they cannot reenter the lake. Golden Lake needs your help to reduce the amount of EWM.

Golden Lake Association, Inc.
